

Doubt Sheets +Issues Resolved

1.Does lombok generates equals and hashCode by default on entity items.
@Data annotation is added

1 Maven Compile Error — “Cannot find symbol” & Weird JDK Errors

Issue

I was getting:

```
cannot find symbol getAirlineCode()  
cannot find symbol getId()
```

And then:

```
java.lang.ExceptionInInitializerError: com.sun.tools.javac.code.TypeTag ::  
UNKNOWN
```

Cause

Your IntelliJ was using one JDK (17), but Maven in terminal was using a **different corrupted JDK** (Temurin was missing / not fully installed).

Fix

- Reinstalled **Temurin JDK 17**
- Updated IntelliJ SDK + Maven Java path

2.Test Failing in AirlineController Test — equals/hashCode Issue

Issue

My WebTestClient response contained **Airline** objects, but my **Airline** entity **did not have equals/hashCode**.

Jackson compares objects → mismatch → tests acted weird.

Instead of comparing whole objects, compare fields:

```
.expectBodyList(Airline.class)
.value(list -> assert list.get(0).getAirlineCode().equals("6E"));
```

Avoids Lombok `@EqualsAndHashCode` dependency.

3. FlightController — test failing with 200 OK instead of 201 Created

Issue

You returned:

```
Mono<ServerResponse>
```

But your controller is a **REST controller**, not a functional WebFlux handler.

WebTestClient got confused and Jackson tried to serialize a `ServerResponse`, causing:

```
No serializer found for DefaultServerResponseBuilder$WriterFunctionResponse
```

Fix

```
Return ResponseEntity:
@PostMapping("/add")
public Mono<ResponseEntity<Void>> addFlight(...) {
    return flightService.addFlight(...)
        .map(saved -> ResponseEntity.status(HttpStatus.CREATED).build());
}
```

Now WebTestClient sees **201 Created** and passes.

4. Cancel Booking Status — Confusion in Flux Flow

Issue

You wrote:

```
bookingRepository.findByEmail(email)
    .flatMap(...)
    .then(ServerResponse.ok().bodyValue("success"));
```

You were confused about `.then()`.

Fix Understanding

`.then(X)` means:

- Ignore all earlier values
- Only return final Mono (X)

Perfect for returning a simple “success” after saving multiple items.

DOUBT

ServerResponse = functional WebFlux

ResponseEntity = annotation-based WebFlux
